**ClevX™ releases [PowerSmart](#) ,  
a new technology to save power on your wireless mouse**

**Kirkland**, WA, November 15, 2007 – ClevX, a leading technology company, has released PowerSmart (patent pending), a technology that extends battery life in wireless mice.

“Frequent battery replacement is the number one complaint among wireless mice users,” said Lev Bolotin, Founder & CEO of ClevX. “[PowerSmart](#) provides manufacturers a means of differentiating and raising the bar on battery life. Less frequent battery replacement means less cost to the user and less impact on the environment”.

The invention generally applies to any battery powered human input device. It has minimal impact on cost-of-goods and can be implemented within an existing form factor.

**Availability of ClevX’s [PowerSmart](#) Technology**

ClevX currently licenses [PowerSmart](#) Technology, as well as other technologies in its portfolio to companies looking for an “edge” over their competition. Visit [www.clevx.com](http://www.clevx.com) for more information.

**About ClevX**

ClevX is a technology leader and innovator in expanding markets. ClevX’s patented solutions target large and rapidly growing markets with applications related to personal computing and mobile professionals.
